

When was the last time you went travelling?

It was last month when my friends and I went to Guilin, Guangxi Province. We were amazed by the beautiful landscape and we experienced a lot of local traditions, which was a lot of fun.

What would you do if you had that opportunity?

I would take my camera with me and record all the exciting things I see. I would then post it on the internet so that more people can know what the outer space really looks like.

Do you think it's necessary to see other planets?

I think it is. Studying other planets will give us a better understanding of the universe. It's important for the scientific development, especially the development of space technology.

Do you like to travel by air?

Yes. I do. Traveling by air is much faster and safer than other ways of transportation, especially when we travel very long distances.

Do you want to travel in the outer space?

Yes. I've always been looking forward it since i like to read science fictions. I hope I can have a chance to see what the outer space is really like with my own eyes.
