

Describe a subject that you like most

You should say

What it is

Where you study/studied it

What you have learned from it

And explain why it is your favorite

English is my favorite subject and that's why I chose it as my major in college.

I learned it mostly at school and I have been studying it since I was in the third grade in primary school.

I have learned a lot of vocabulary and now I have mastered about ten thousand words. It's not a problem for me to communicate with native speakers. Also, I am able to watch English movies without subtitles.

I like it because this language enables me to get a general idea of the culture of Western countries. Besides, learning English also allows me to observe life from another perspective and think in a new pattern. It's my favorite because it is easy for me to learn and it's fun. I can learn it even by watching movies or American TV series. It just makes me full of sense of achievement when I am able to communicate with others in a foreign language.

What subjects are less practical in everyday life?

To me, math and physics are not very practical. I barely use them in my life. I guess they are more often applied in the field of science and technology.

其他观点

I think physics are less practical than other subjects in my everyday life. I hardly ever come across a situation when have to use physics. It's probably because I'm not a big fan of it.

Do you think art subjects are less useful than science subjects?

I don't think one is less useful or more useful than the other. They focus on different aspects and areas of our work and life, but they are equally important. Students should learn both.

其他观点

I don't think so. Liberal art subjects are about social skills and art. They can also enrich our spiritual world. Science subjects, on the other hand, are the key to scientific and technological development. So, they are both very useful.

Do you think students should have the right to choose the subject that they want to study in university?

Yes, I do. College students know where their interest lies and what they are good at, so they can make rational choices based on their own situations. They can be responsible for their own choices.

其他观点

Yes, I think so. University students are mature enough to make decisions on subject or major according to their own interests or strength. Their parents shouldn't intervene in the decision-making process.

What kinds of new subjects would emerge in the future?

Subjects that base on people's real needs will emerge. For example, I think there would be a new subject about communication skills. In this subject, student can learn how to communicate with people in different settings.

其他观点

I think new subjects like Artificial Intelligence will emerge, as I believe it is the trend of the technological development. The society needs talents in these fields.

What subjects are practical in everyday life?

I think Chinese is very practical. It teaches us verbal and written skills needed for communication, both in life and work settings. Learning Chinese well can definitely be very Helpful.

其他观点

Chinese is a very practical subject which allows us to communicate with people effectively and appropriately, which is a crucial skill in today' s world. I wish I studied it harder when I was in school.
