

Describe an interesting animal

You should say:

What it looks like

When you saw/knew it for the first time

Where it lives

and explain why it is interesting

The interesting animal am going to talk about is squirrel. I have two in my dorm. They are very cute. They are covered with soft fur and their eyes are very large and bright. They have long ears and fluffy tails. It was on my tenth birthday when I saw squirrels for the first time. They were jumping around in the trees and were very lively and adorable.

Most squirrels live in forests especially on the slopes or in the forests on both sides of a valley.

They are very interesting not only because they are lovely, but also because they are not picky eaters. They eat both vegetables and meat. The color of their hair will change with the seasons. Squirrels make very docile pets. They like to gently rub your fingers with their teeth and play with you, which may make you feel a little bit itchy. This is their way of being friendly to you.

Do you support doing experiment on animals?

These experiments are important in promoting medical development and can help us find cures for diseases. So, I think we can use some animals, such as mice, to do medical experiments before we find other alternatives that don't involve animals.

其他观点

I think a right amount of these experiments are needed since they are still necessary for us to fight against diseases. But I cannot say I support it, and I think we should try to ease their pain when we are doing experiments on them, so they don't suffer.

What would happen when some species disappear on earth?

Personally, I think human life will not be greatly affected if some of the species die out. It's the law of nature that only the more adaptable species survive. But that doesn't mean we could harm the species and destroy their habitat.

其他观点

When species disappear, it will harm the biodiversity on earth, meaning there would be fewer species on this planet. Future generations will have to live in a less diverse and exciting world. Therefore, we should try our best to protect the endangered species.

What should we do to protect endangered animals?

We should not hunt the endangered animals for its meat or fur. In addition, we need to make an effort in protecting their natural habitat. For example, human activities like cutting down trees and polluting the water in their natural surroundings should be banned.

其他观点

The government should set up preservation areas for these endangered species so that they can live and reproduce. There should also be legislation and international cooperation.

Have you seen any TV programs about animals?

Yes, I've seen a program named Animal World. It shows all kinds of animals in nature to the audiences. So, we can see how they hunt, how they take care of their babies and everything from a very close perspective, which is really cool.

其他观点

Yes, I often watch Animal World, a documentary about different kinds of animals on earth. I've learned a lot about the habits of different animals through this program. I become more interested in animals after watching it.

Why do some people refuse to eat animals?

Some people refuse meat because they are allergic to it, while some other people don't eat it out of their respect for life. They simply think it's not right to kill animals for food. There are also religious reasons for not eating meat, like Muslims don't eat pork.

其他观点

Some people are vegetarians because they believe vegetables and fruits are better for people's health. Some don't eat meat due to religious reasons or advocacy for animal rights.
